

CLAIMS

1. A swimming pool filter comprising a filter body (1) being formed by
5 a casing (2) with a top cover (3) and a footing being equipped with a motor-
driven pump; wherein the cover (3) forms a water distributor (4), this latter
being compartmented (6, 7, 8, 9 and 10), upperly open (11) and provided with
lateral openings (12, 13, 14 and 15) for a selected water inflow and outflow,
said distributor (4) being closed by a rotatable (24), compartmented (20, 21, 22
10 and 32) sealing subcover (19).

2. A swimming pool filter as per claim 1, wherein the subcover (19) is
apt to be stabilized in its different positions by means of peripheral projections
(27) being apt to selectively fit into a socket (28) being integral with the cover
15 (3) in the vicinity of its open top (11).

3. A swimming pool filter as per claim 1, wherein a receiver (32) is
inferiorly fitted to the casing (2) and is made up of a grid-like plate conforming
to the periphery of said casing (2).

20

4. A swimming pool filter as per claim 3, wherein the cover (3)
comprises the water distributor (4), the casing (2) has handles (34, 35), and the
footing (30') forms a housing being provided with a bottom cap (38) and

having a side opening (39) through which the motor-driven pump (31') projects, the liquid distributor (4), the cover (3), the casing (2) and the footing (30') being in a vertically aligned relationship with each other.

5 5. A swimming pool filter as per claim 3, wherein the motor-driven pump (31') is connected to the water distributor (4) by means of an outer hose (37).

 6. A swimming pool filter as per claim 3, wherein the cover (3) is
10 secured to the casing (2) by means of a clamp (43).
